DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the rotational operating member in claim 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an

application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the backgrounds of figures 1 and 4 are shaded and the figures are hard to read. Also, there are several lead lines in figure 1 that have not elements attached to them. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-10, 12-14 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Granger (4,635,837). Granger discloses housing shown in side view in figures 1 and 3; opening through which the web passes in figures 1 and 3; roll carrier E1, T3, 41; slot 3a; drum 3; first and second cutting blades 7a1 and 7a2; mechanism 8, 7c, 7b1, 40, 4, 4c, 7, 7b; tab/tail in column 2, lines 4-18; non-slip surface in column 6, line 39; cam 4c; follower 7b2; block 7; slot is juxtaposed elements 40 and 7b2, and is circular with a portion directed toward center adjacent

element 4; guide roller 38; guide roller and cutting drum are rotationally connected via element 39; rotational operating member 39; elastic member juxtaposed between element 1 and 41 in figures 5 and 3; hinge 8; cam 4c for moving the cutting device in and out of the drum.

Allowable Subject Matter

6. Claims 11, 15 and 17-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Granger discloses everything as noted above, but does not disclose a cam juxtaposed the blades in order to adjust the width of the tab/tail portion of the web. Ross (3,686,988) teaches blades movable a shaft in order to adjust the width of the tail/tab portion of the web, but does not teach a cam juxtaposed the blades. Scott (3,762,264) teaches cams that change the position of punches in a lateral direction with respect to one another, but doesn't teach a cam juxtaposed the punches. Nolan et al (5,009,140) teaches cams and eccentrics to change the position of a elements transversely to one another, but does not teach a cam juxtaposed between two blades. It would not have been obvious to combine the references with teachings in the prior art in order to meet the claim limitations.
